PROFESSIONAL SUMMARY

Full-Stack & GenAI developer with 2+ years of experience building intelligent SaaS platforms, agentic AI workflows, and scalable backend systems. Proven track record shipping production-grade applications spanning LLM orchestration, multi-role platforms, and real-time data pipelines — from concept to deployment.

TECH SKILLS

- **Language** - Javascript, Typescript, Python
- **Backend** - NodeJs, FastAPI, Express.js, Redis, Celery, Postgress, MySQL, Vector DB
- **GenAI** - LangChain, LangGraph, OpenAI SDK, Agentic SDK, Mem0, Neo4j
- **Frontend** - NextJs, ReactJs, Redux Toolkit, Tailwind
- **Devops** - Git, Github, Docker, AWS EC2 & Bucket, Nginx,

PERSONAL EXPERIENCE

Weblogik - AI Learning Management Platform

<https://weblogik.ai>

- Architected a multi-tenant AI Learning Management System with a 3-tier role hierarchy — Master Admin, White-label Org Admin, and Learners — enabling unlimited organizations to launch branded learning portals at scale.
- Built an end-to-end Agentic RAG pipeline using LangChain with OpenAI text-embedding-3-large, indexing 10,00+ course content vectors in Pinecone DB for sub-second semantic retrieval across all modules.
- Engineered a distributed task system with Celery workers and Redis as message broker, handling 500+ concurrent AI content generation jobs and delivering 3x throughput improvement over synchronous processing.
- Developed an AI course chatbot enabling learners to engage with modules and validate knowledge through AI-assessed quizzes, driving a 40% increase in learner engagement and 25% improvement in course completion rates.
- Built "Blueprint" — an auto-generated Living Document that summarizes AI-student conversations for consultant review, reducing manual review effort by 60% and accelerating student support cycles.
- Shipped an Agentic System Analytics agent that answers real-time platform metrics queries via natural language, eliminating manual dashboard reporting for admins.
- Tech: FastAPI, PostgreSQL, LangChain, Pinecone, Redis, Celery, OpenAI API, Docker.

Travulu - AI Travel Assistant

<https://travulu.com>

- Built an AI-powered travel assistant covering 100+ global destinations, providing personalized recommendations for tourist spots, local cuisine, weather conditions, and optimal travel months based on real-time contextual data.
- Designed a multi-agent workflow using OpenAI Agent SDK with a Manager Agent orchestrating specialized Hotel Agent and Flight Agent sub-agents, automatically routing 95%+ of queries to the correct specialist without manual intervention.
- Integrated external tool-calling APIs to surface real-time hotel availability (economy to business class) and live flight pricing, reducing trip-planning time by 60%.
- Implemented an automated 7-day itinerary generator producing structured day-by-day travel plans — activities, transport options, and cost estimates — in under 5 seconds, reducing trip planning effort from hours to seconds.
- Tools: Node.js, OpenAI Agent SDK, Next.js, MySQL.

CoverLaunch - Insurance Lead Management Platform

<https://coverlaunch.com>

- Implement a full-featured frontend platform with separate Admin, Agent, and Affiliate dashboards for lead management, campaign tracking, and performance analytics across three distinct user roles.
- Integrated Stripe payment gateway for PCI-compliant subscription billing and transaction processing, enabling

secure and scalable platform monetization.

- Implemented Redux Toolkit for centralized state management across complex multi-role workflows, reducing state-related bugs by 50% and improving overall frontend predictability.
- Tech: React.js, Redux & Redux Toolkit, Kanban, Google Calendar,

EDUCATION

Master of Computer Application - Apex University Jaipur 2023-25
